

# Lyofast MOS 052 D

**Description**

**Lyofast MOS 052 D** consists of specifically selected strains of *Lactococcus lactis* ssp. *lactis*, *Lactococcus lactis* ssp. *cremoris* and *Streptococcus thermophilus* to ensure a uniform and controlled production of fresh cheese, soft cheese, and semi-hard cheese.

**Application**

Sprinkle the culture powder directly into process milk under aseptic conditions ensuring that the culture is well dispersed by gentle stirring. The following may be used as inoculation guidelines:

Product	UC/100 l	Product	UC/100 l
Fresh cheese	0.5-2.0	Soft cheese	0.7-2.0
Semi-hard cheese	1.0-2.5		

**Rotation**

The recommended rotations are Lyofast MOS 054 D/MOS 056 D.

**Acidification information**

Standardised laboratory acidification test is conducted in milk powder, reconstituted at 9%, at defined temperature.

Acidification profile: inoculation level corresponding to 1 UC per 100 litres milk.

Standard activity: expressed as temperature/time/pH relations: 34°C/5.5 hours/pH 5.2 ± 0.1.

**Culture information**

Data are obtained under standardised laboratory conditions, and consequently, should be considered as guidelines.

Optimal temperature for growth	30-37 °C	Scalding temperature	Max. 43°C
Acidification capability	pH 4.2	Proteolytic activity for cheese	++
Urease activity	+		

**Storage**

Unopened pouches should be kept below -17°C.
